Plants At The Time Of The Dinosaurs

Dinosaur-Researcher – Name:

You have already read the chapter Plants At The Time Of The Dinosaurs? Now it is your term to show what you have learned!

Fill in!

Triassic period - plants growing in the hot and dry climate

On the country it was hot and dry, so there were many desert-like areas. In the fertile river valleys and on the coasts of the sea mainly _____ and conifers thrive. Later there are also plants that can store water, so called _____.

Ferns and ginkgo plants spread out and in the seas the first _____ formed.

Jurassic period - plants in changing seasons

With the breaking up of the gigantic land masses the climate started to change. It became humid and the _____ became more and more noticeable. In the country there grew box stalk plants, ferns, treeferns, palm ferns, a variety of _____ plants and conifers like the _____. In the seas there were above all _____.

Cretaceous period - plants in the cooler climate

The climate was stronger influenced by the four seasons. In the country it rained more and more and also the air became considerably chiller. There were still conifers, ferns and box stalks, but at the beginning of the Cretaceous period palms and _____ developed and at the end of the Cretaceous period the first trees appeared that looked similar to our today's beeches and _____.
