

## Second research report to the scientific headquarters

### When Did The Dinosaurs Live

**Dinosaur-Researcher – Name:**

---

---

You have already read the chapter When Did The Dinosaurs Live?  
Now it is your term to show what you have learned!

**Fill in!**

Dinosaurs lived a long, long time ago in the era called \_\_\_\_\_.

**About** \_\_\_\_\_ **years ago** during the \_\_\_\_\_ there was only one huge connected land mass. The climate got warmer and giant ferns and \_\_\_\_\_ dominated the landscape.

**About** \_\_\_\_\_ **years ago** in the \_\_\_\_\_ some continents broke away from the land mass. It got warmer and warmer and this humid climate caused

extensive forests on Earth's surface. This led to a rapid spread of the dinosaurs and many different types evolved. There were huge vegetarian dinosaurs like \_\_\_\_\_ but also big predatory dinosaurs like \_\_\_\_\_.

In this period \_\_\_\_\_ appeared who indeed had wings, but like a dinosaur also claws and a jaw with sharp teeth.

During the \_\_\_\_\_ period **about** \_\_\_\_\_ years ago the land mass finally broke up in individual continents and the climate became increasingly influenced by the four seasons. Ash, \_\_\_\_\_, magnolia, giant \_\_\_\_\_ trees and various flowering plants soon dominated the landscape. On the different continents many new types of dinosaurs evolved, including the famous dinosaurs from the film series Jurassic Park like the king of carnivorous dinosaurs, the \_\_\_\_\_, the smaller \_\_\_\_\_ and rhino-like herbivores like the \_\_\_\_\_.
